Mechanical Seals Total Solutions

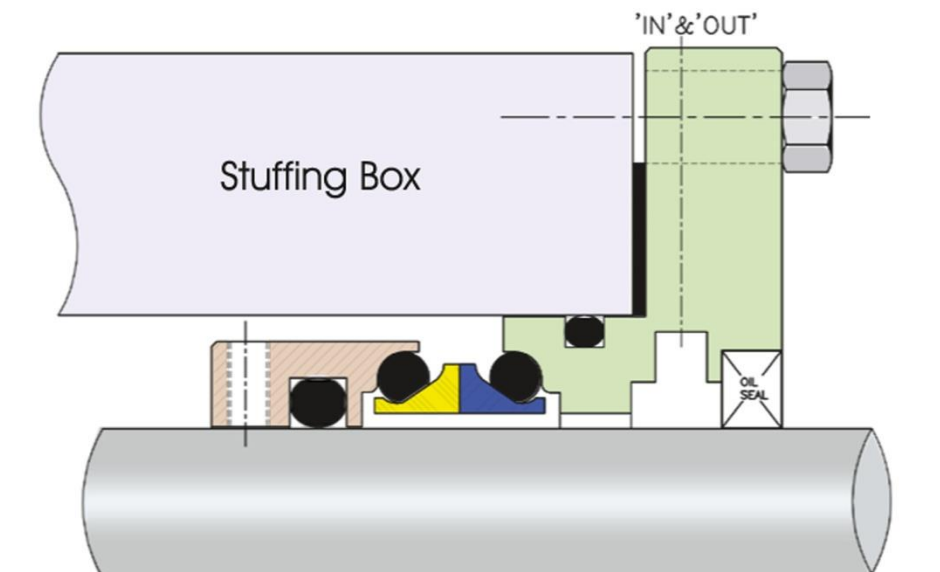

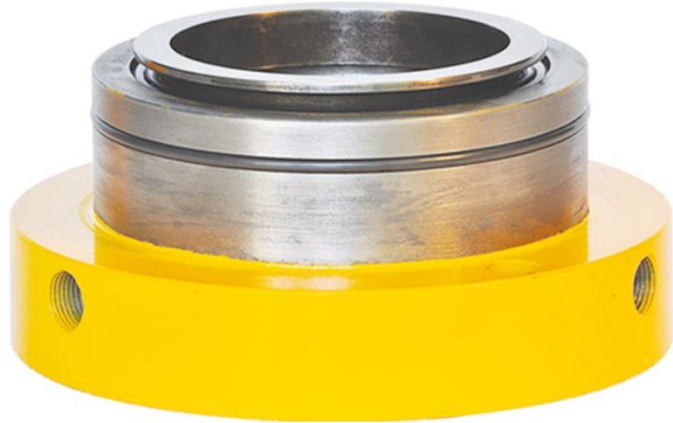

Springless Seal - ISPL 2421

- Single seal
- Independent on direction of rotation
- Springless seal
- Low cost
- Simple reliable design
- Long service life.

Applications:

- Used high viscous / thick liquids like
- Massecurite application in sugar industry

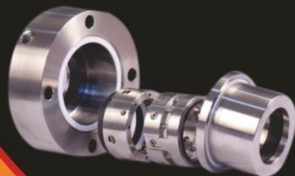

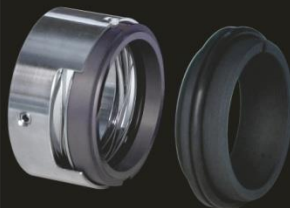

These seals are self-centering to compensate for shaft eccentricity or misalignment. The lubrication serves two important functions, therefore it is needed in all cases. It reduces the friction between the seal face & the mating faces and it acts as a cooling agent for the complete shaft & seal housing.

ISPL-2421 Springless Seal
