Mechanical Seals Total Solutions

Balanced Wave Spring Seal - ISPL 2428

- Wave spring single seal
- Balanced
- Independent on direction of rotation
- Spring product protected

Applications:

- Suitable for operating in highly viscous fluids or with fluids containing solid particles.
- The incorporated sleeve makes it a balanced seal without requiring notching of shaft.

A suitable designed body has the double function of providing a locking system on the shaft & of working as a sleeve on which the rotary ring is installed.

Springs are inside the seal body, protected by the rotary sealing ring. These seals can also easily replace most seals without the need of any modifications.

ISPL-2428 Balanced Type Wave Spring Seal
